Claim Objections

1. Claim 3 is objected to because of the following informalities: The term "an" in line 2 should be replaced with the term --a-- for grammatical clarity. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishimura et al. Nishimura et al shows a track having an endless longitudinal body 1 with an inner surface displaying a series of longitudinally spaced drive lugs 2 and an outer surface displaying a series of longitudinally spaced profiles 6. Each profile 6 displays a decreasing value in height from the center of the body 1 to outer edges thereof. The body 1 is formed from a flexible rubber material that is free of conventional transversely extending reinforcing embedded rods.

While Nishimura et al does not specify that this lack of transversely extending reinforcing embedded rods provides a reduced transverse rigidity, thus allowing the body to curvingly flex when engaged with uneven ground; the track of Nishimura et al is capable of doing so due to its lack of transversely embedded reinforcing rods.

Art Unit: 3617

The profile 6 of the body 1 is formed of three levels of profile sections, and includes a central section, a pair of opposite intermediate section (namely the inclined portion), and a pair of opposite edge sections. The central section displays a hexagonal mass having a thickness greater than the thickness of the intermediate and edge sections of the profile 6 (see Figure 2A).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references are considered to show endless tracks formed of a flexible non-transversely reinforced flexible body with a height decreasing outer tread profile. For example, Russell shows a track of the type described above.
